ON THE SHIFTED QR ITERATION APPLIED TO COMPANION MATRICES

DARIO A. BINI, FRANCESCO DADDI, AND LUCA GEMIGNANI

Abstract. We show that the shifted QR iteration applied to a companion matrix $F$ maintains the weakly semiseparable structure of $F$. More precisely, if $A_i - \alpha_i I = Q_i R_i$, $A_{i+1} := R_i Q_i + \alpha_i I$, $i = 0, 1, \ldots$, where $A_0 = F$, then we prove that $Q_i$, $R_i$ and $A_i$ are semiseparable matrices having semiseparability rank at most 1, 4 and 3, respectively. This structural property is used to design an algorithm for performing a single step of the QR iteration in just $O(n)$ flops. The robustness and reliability of this algorithm is discussed. Applications to approximating polynomial roots are shown.

Key words. companion matrices, QR factorization, QR iteration, semiseparable matrices, eigenvalues, polynomial roots.
